

Serial No. 10/724 339  
Amendment dated November 20, 2005  
Reply to Office action of May 20, 2005

Amendments to the Specification:

Please replace the last paragraph on page 4 which extends onto page 5, lines 25-33 on page 4 and lines 1-2 of page 5, with the following amended paragraph:

The elevator plate 202 includes three fixed cam lifters 210-212 that surround an outer collar 214. This mates with an inner collar 216 on the triple-lobe cam 204. Three identical cam lobes 218-220 match the distribution of the ~~distribution~~ fixed cam lifters 210-212. The triple-lobe cam 204 is intended to rotate relative to the elevator plate 202, and this rotation will cause elevator plate 202 to smoothly rise and fall. The three fixed cam lifters 210-212 provide a three-point support to maintain the parallel plane alignment of the top surface of elevator plate 202 with a base 222.

*DEJ  
5/17/06*  
Please replace the second full paragraph on page 5, lines <sup>17-19</sup> ~~19-21~~, with the following amended paragraph:

The multiple-lobe cam and cam lifters can mutually provide flat spots 240-244 on which to rest at minimum and maximum heights of elevation of the elevator plate.
